FONDS DE SOUTIEN - STEUNFONDS  
MARGUERITE-MARIE DELACROIX

1. **Can you attach a scanned copy of your funded research grant application as a separate document? (PDF format)**

**Yes**

**No**

2. **Can you briefly explain the objectives of the research you conducted as part of the research grant?**

*(Max. 500 words, Helvetica font, 12 pt)*

FONDS DE SOUTIEN - STEUNFONDS  
MARGUERITE-MARIE DELACROIX

**3. Please provide a detailed description of the results you obtained.**

(Max. 1,000 words, Helvetica font, 12 pt)

#### 4. Communication of scientific results

Have the research results been published in peer-reviewed journals? In other journals?

Have the research results been presented at study days or conferences (national, international)?

*(Max. 250 words, Helvetica font, 12 pt)*

#### 5. Impact of your research

May we ask to what extent the research and the results of your research correspond to the objectives as presented in the “*Research Grant Application*” form of the Support Fund?

By prevention we mean both **primary prevention**, i.e., the objective of reducing the number of people presenting developmental disorders as described in the “*Research Grant Application*” form, and **secondary prevention**, i.e., the objective of reducing the consequences of these developmental disorders. For autism, for example, this means early detection of autism in young children.

Did your project contribute to achieving these objectives?

*(Max. 250 words, Helvetica font, 12 pt)*

**6. Researcher's personal comments**

Can you tell us to what extent this research project was important for your research?

*(Max. 250 words, Helvetica font, 12 pt).*

**7. Promotor(s)' personal comments**

Could you indicate to what extent this research project contributed to research within your research group?

*(Max. 250 words, Helvetica font, 12 pt).*

**8. What are your future plans related to this research?**

What follow-up to your research do you envisage? (For example: an extension of the same research? Other research arising from the results? Clinical research? Collaboration with other laboratories? Collaboration with other groups in the field of prevention? No follow-up planned?)

*(Max. 500 words, Helvetica font, 12 pt).*

## 9. *Audiovisual report*

Please make an audio-video recording presenting the research you carried out thanks to the Support Fund.

As mentioned in point 5 (“Impact of your research”), it is important that the audio-video recording indicates to what extent the research and the results correspond to the objectives of the Support Fund as proposed in the “*Research Grant Application*” form.

The recording should be no longer than five minutes. The spoken language may be French, Dutch, or English. Ideally, the recording should be of interest to expert scientists in the field, but also to scientists who are less familiar with the topic and, preferably, be understandable to the general public.
